THE REPLY FILED 25 September 2007 FAILS TO PLACE THIS APPLICATION IN CONDITION FOR ALLOWANCE.							
The reply was filed after a final rejection, but prior to or on the same day as filing a Notice of Appeal. To avoid abandonment of this application, applicant must timely file one of the following replies: (1) an amendment, affidavit, or other evidence, which places the application in condition for allowance; (2) a Notice of Appeal (with appeal fee) in compliance with 37 CFR 41.31; or (3) a Request for Continued Examination (RCE) in compliance with 37 CFR 1.114. The reply must be filed within one of the following time periods:							
a) The period for reply expires <u>3</u> months from the mailing date	e of the final rejection.						
b) The period for reply expires on: (1) the mailing date of this no event, however, will the statutory period for reply expire Examiner Note: If box 1 is checked, check either box (a) or TWO MONTHS OF THE FINAL REJECTION. Extensions of time may be obtained under 37 CFR 1.136(a). The date on which the petition under 37 CFR 1.136(a) and the appropriate extension fee have been filed is the date for purposes of determining the period of extension and the corresponding amount of the fee. The appropriate extension fee under 37 CFR 1.17(a) is calculated from: (1) the expiration date of the shortened statutory period for reply originally set in the final Office action; or (2) as set forth in (b) above, if checked. Any reply received by the Office later than three months after the mailing date of the final rejection, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Continuation of 11. does NOT place the application in condition for allowance because: the examiner maintains the rejection that it would have been obvious to one of ordinary skill in the art at the time of the invention to remove the iron core of the inductance coils in the dart board apparatus disclosed by Fuscone without destroying the functionality of the overall invention. As previously stated, the purpose of the iron cores is to enhance the magnetic field created by the presence of the dart however an inductance coil does not require the presence of the iron cores in order to function. As further evidence of this the examiner refers the applicant to the invention disclosed by Gordon et al. (US 5,419,565), which teaches an electrical device for detecting the location of impact of a missile coming into contact with a target analogous to a dart board for detecting the impact position of an incoming dart. In one embodiment of the invention disclosed by Gordon, coils are utilized as detection means (Fig. 5), wherein "The coils may be air wound or, to achieve a higher field, wound around a ferromagnetic core" (Col. 5, lines 1-3). Thus, applicant's arguments that removing the iron cores in the invention disclosed by Fuscone destroys the overall functionality of the invention is not persuasive and the examiner maintains that it would have been obvious to one of ordinary skill in the art at the time of the invention to remove the iron cores in the inductance coils disclosed by Fuscone.
